Project Summary

WhatNext Vision Motors is a Salesforce-based vehicle management and customer relationship solution designed to manage vehicle, dealer, customer, and vehicle order information through a centralized platform. The system uses Salesforce custom objects and fields to organize vehicle and dealership data with defined relationships between the records.

Salesforce Lightning App Manager provides a dedicated application for accessing the vehicle management modules, while Salesforce Flows automate key business processes. A record-triggered flow supports assigning the nearest dealer based on the customer's location when a vehicle order is created. Apex classes, triggers, and batch jobs are also implemented to support automated order processing and handling of records efficiently.

The result is a more organized and automated vehicle management system, providing centralized data management, streamlined dealer assignment, and improved efficiency in vehicle order processing through Salesforce.

User Story

WhatNext Vision Motors is a Salesforce-based vehicle management solution designed to improve vehicle ordering and dealership operations. The project centralizes **vehicle, dealer, customer, and order information** using Salesforce custom objects and fields.

The system streamlines vehicle order management by using **record-triggered flows** to automate business processes, including assigning the nearest dealer based on the customer's location. A dedicated **Lightning App** provides easy access to the vehicle management modules, while **Apex classes, triggers, and batch jobs** support automated order processing and efficient record management.

This solution helps **reduce manual work, improve data organization, simplify dealer assignment, and increase the overall efficiency of vehicle order processing**.

1. INTRODUCTION

1.1 Project Overview :

WhatNext Vision Motors is a Salesforce-based vehicle management and CRM solution developed to streamline vehicle ordering and dealership operations. The system provides a centralized platform for managing **vehicle, dealer, customer, and vehicle order information** using Salesforce custom objects and fields.

The project incorporates **Salesforce Lightning App Manager, custom tabs, record-triggered flows, Apex classes, triggers, and batch jobs** to automate and simplify business processes. The record-triggered flow supports assigning a vehicle order to the **nearest dealer based on the customer's location**, while Apex and batch processing help manage order-related operations efficiently.

By replacing manual data handling with a centralized and automated Salesforce platform, the solution improves **data organization, reduces manual intervention, streamlines vehicle order processing, and enhances overall operational efficiency**.

1.2 Purpose :

The purpose of this project is to **streamline vehicle ordering and dealership operations using Salesforce CRM**. The system aims to centralize vehicle, dealer, customer, and vehicle order information while automating important business processes such as **assigning orders to the nearest dealer based on the customer's location**.

The project reduces manual intervention by using **Salesforce Flows, Apex classes, triggers, and batch jobs** for efficient order processing and data management. It helps improve **data organization, order accuracy, operational efficiency, and the overall customer experience**.

2. IDEATION PHASE:

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Operations Manager	manage vehicle orders	vehicle and dealer information is difficult to manage manually	information is maintained across different processes and requires manual intervention	stressed
PS-2	Customer	place a vehicle order	dealer assignment and order processing are not streamlined	the process depends on manual coordination and customer location	uncertain
PS-3	Dealer	manage vehicle orders and customer requests	relevant vehicle and customer information is not centralized	information needs to be accessed and processed from multiple records	frustrated
PS-4	Operations Team	process vehicle orders efficiently	order processing requires manual effort	there is a need for automated workflows and record processing	overloaded

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	 Operations Manager	manage vehicle orders 	vehicle and dealer information is difficult to manage manually 	information is maintained across different processes and requires manual intervention 	 stressed
PS-2	 Customer	place a vehicle order 	availability is unclear and dealer assignment is not streamlined 	the process depends on manual coordination and customer location 	 uncertain

2.2 Empathy Map Canvas

User Persona: Operations Manager

- **Think & Feel:** Concerned about incorrect vehicle orders, stock errors, and inefficient order processing.
- **Hear:** Complaints and follow-up requests from dealers and customers regarding vehicle orders and availability.
- **See:** Manual records, spreadsheets, and disconnected vehicle and dealer information.
- **Say & Do:** Performs manual follow-ups, coordinates with dealers, and manages vehicle orders.
- **Pain:** Delays in order processing, stock-related issues, and order cancellations.
- **Gain:** Automated order processing, centralized data management, and Salesforce dashboards for better visibility.

2.3 Brainstorming & Idea Prioritization

Ideas Considered

- **Manual Registers** – Simple to maintain but time-consuming and prone to human errors.
- **Spreadsheet Tracking** – Provides basic record management but lacks automation and real-time updates.
- **Standalone Portal** – Offers a dedicated ordering platform but requires additional development and maintenance.
- **Salesforce CRM** – Provides centralized data management, workflow automation, dealer assignment, stock validation, and real-time visibility.

Final Selection: Salesforce CRM

Salesforce CRM was selected as the final solution because it provides:

- **Automation** – Automates vehicle ordering, stock validation, dealer assignment, and status updates.
- **Scalability** – Can support increasing numbers of customers, vehicles, dealers, and orders.
- **Real-Time Visibility** – Provides up-to-date information about vehicle stock, orders, and delivery status.
- **Centralized Management** – Maintains customer, vehicle, dealer, and order information in one platform.

- **Improved Efficiency** – Reduces manual work, errors, delays, and unnecessary follow-ups.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Inquiry → Vehicle Selection → Order Placement → Dealer Assignment → Stock Validation → Test Drive → Confirmation → Reporting

3.2 Solution Requirements

Functional Requirements

FR No.	Requirement
FR-1	Vehicle Management
FR-2	Dealer Management
FR-3	Customer Order Creation
FR-4	Stock Validation
FR-5	Dealer Auto-Assignment
FR-6	Test Drive Scheduling
FR-7	Reports & Dashboards

Non-Functional Requirements

NFR	Description
Usability	Lightning UI for easy navigation
Security	Role-based access control
Reliability	Accurate automation
Performance	Fast order processing
Availability	24/7 cloud access
Scalability	Multi-dealer support

3.3 Data Flow Diagram

The data flow of the **WhatNext Vision Motors Salesforce CRM** system is:

Customer Input → Order Creation → Stock Validation → Dealer Assignment → Status Update → Reports

3.4 Technology Stack

The WhatNext Vision Motors project uses Salesforce technologies to manage vehicle ordering, dealer operations, automation, and reporting through a centralized CRM platform.

Layer	Technology
UI	Salesforce Lightning
Logic	Salesforce Flows
Database	Salesforce Objects
Automation	Validation Rules, Apex Triggers
Processing	Batch Apex, Scheduled Apex
Reporting	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The **WhatNext Vision Motors** project addresses fragmented vehicle-ordering and dealership operations by providing a centralized Salesforce CRM solution. The system integrates **automated stock validation, nearest-dealer assignment, order processing, and status updates** into a single platform. This reduces manual intervention, minimizes order-related errors, and improves the efficiency and visibility of the overall vehicle ordering process.

4.2 Proposed Solution

Parameter	Description
Problem	Manual vehicle ordering
Solution	Salesforce CRM
Innovation	Automated dealer assignment
Impact	Faster service
Business Model	Dealer network
Scalability	Multi-location support

4.3 Solution Architecture

The **WhatNext Vision Motors** Salesforce CRM solution is designed using the following components:

Core Salesforce Objects

- **Vehicle Object** – Manages vehicle details and stock information.
- **Dealer Object** – Maintains dealer information and locations.
- **Customer Object** – Stores customer details.
- **Order Object** – Manages vehicle orders and order status.
- **Test Drive Object** – Handles test drive scheduling and details.
- **Service Request Object** – Manages customer service requests.

Automation & Processing

- **Flows** – Automate vehicle ordering, stock validation, dealer assignment, and status updates.
- **Apex Triggers** – Perform automated actions based on changes to records.
- **Batch Jobs** – Process large volumes of vehicle and stock data efficiently.

Reporting & Monitoring

- **Reports** – Provide organized information about vehicles, orders, dealers, and customers.
- **Dashboards** – Present key operational information through visual charts and summaries.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Member
Sprint-1	Salesforce Setup	USN-1	As a system administrator, I want to configure the Salesforce environment so that the vehicle ordering and dealer management system can be developed.	3	High	Immanuel Luther K
Sprint-2	Data Modeling	USN-2	As an administrator, I want to create Vehicle, Dealer, Customer, Order, Test Drive, and Service Request objects so that business data can be stored systematically.	5	High	Kannan
Sprint-2	Data Modeling	USN-3	As a staff member, I want dedicated tabs and a Lightning App for all modules so that I can easily navigate and manage vehicle orders and dealer operations.	5	High	Rishi Kumar R
Sprint-3	Automation	USN-4	As a system, I want to validate stock availability, mandatory fields, and order inputs so that invalid or incomplete vehicle orders are prevented.	3	High	Immanuel Luther K
Sprint-3	Automation	USN-5	As a sales coordinator, I want automated flows to assign the nearest dealer and update order status so that processing becomes faster and requires minimal manual effort.	3	High	Rishi Kumar R
Sprint-4	Apex	USN-6	As a system, I want Apex triggers to automatically perform actions such as order confirmation and dealer assignment so that critical processes occur instantly and accurately.	5	High	Gowtham

Sprint-4	Apex	USN-7	As an inventory manager, I want batch jobs to update vehicle stock levels automatically so that inventory data remains accurate and up to date.	5	High	Gowtham
Sprint-5	Reports	USN-8	As a manager, I want reports showing order status, dealer performance, and sales metrics so that I can monitor operations and make informed decisions.	4	High	Kannan
Sprint-6	Dashboards	USN-9	As a manager, I want dashboards showing order status, dealer performance, and sales metrics so that I can monitor operations and make informed decisions.	4	Medium	Immanuel Luther K

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned Date)	Sprint Release Date (Actual)
Sprint-1	20	60min	28-09-26	28-09-26	20	28-09-26
Sprint-2	20	95min	29-09-26	29-09-26	20	29-09-26
Sprint-3	20	70min	29-09-26	29-09-26	20	29-09-26
Sprint-4	20	35min	30-09-26	30-09-26	20	30-09-26
Sprint-5	20	55min	01-10-26	01-10-26	20	01-10-26
Sprint-6	20	1day	03-10-26	03-10-26	20	03-10-26

6. Project Development Phase:

Milestone 1: Salesforce Account

Activity 1: Creating Salesforce Developer Account

A Salesforce Developer Account was created to develop and implement the **WhatNext Vision Motors CRM system**. The Salesforce Developer Edition provides the required environment for configuring custom objects, fields, relationships, automation, Apex, and reports.

Steps:

1. Visit the Salesforce Developer website and select **Sign Up**.
2. Enter the required user details.
3. Select **India** as the country.
4. Provide the required organization and contact information.
5. Submit the registration form to create the Salesforce Developer Account.
6. Use the registered email address to access the Salesforce development environment

Activity 2: Account Activation

After creating the account, the registered email address was verified to activate the Salesforce Developer Account. Once activated, the Salesforce development environment was accessed for implementing the **WhatNext Vision Motors** project.

Outcome:

A Salesforce Developer Account and development environment were successfully established for building the WhatNext Vision Motors vehicle ordering and dealer management CRM system.

WhatNext Vision Motors – Salesforce Implementation

Milestone 2: Data Management – Objects

Objects & Relationships

Object Name	Purpose	Relationships
Vehicle__c	Stores vehicle details and stock information	Related to Dealer & Orders
Dealer__c	Stores dealer details and location information	Related to Vehicles & Orders
Customer__c	Stores customer details and information	Related to Orders & Test Drives
Order__c	Stores and tracks vehicle orders	Related to Customer, Vehicle & Dealer
Test_Drive__c	Stores and manages test drive bookings	Related to Customer & Vehicle
Service_Request__c	Stores customer service requests	Related to Customer & Vehicle

Short description for below the table:

The required Salesforce custom objects were created to manage vehicle, dealer, customer, order, test drive, and service request information. Relationships between these objects enable the system to connect customer orders with vehicles and dealers, manage test drive bookings, and track service requests efficiently.

Activity 1: Create Vehicle Object

The purpose of creating a Vehicle custom object is to have a clear picture of the vehicle details. To create an object:

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

The screenshot shows the 'New Custom Object' setup page in Salesforce. The 'Custom Object Information' section is filled out with the following details:

- Label:** Vehicle (Example: Account)
- Plural Label:** Vehicles (Example: Accounts)
- Starts with vowel sound:** ☐
- Object Name:** Vehicle (Example: Account)
- Description:** (Empty text area)
- Context-Sensitive Help Setting:** ☒ Open the standard Salesforce.com Help & Training window
- Context Name:** --None--

The 'Enter Record Name Label and Format' section shows:

- Record Name:** Vehicle Name (Example: Account Name)
- Data Type:** Text (Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.)

The 'Optional Features' section has all checkboxes (Allow Reports, Allow Activities, Track Field History, Allow in Chatter Groups, Enable Licensing) unchecked.

Activity 2: Create Dealer Object

The purpose of creating a Dealer object is to store and manage detailed information about dealers associated with WhatNext Vision Motors..

The screenshot shows the 'New Custom Object' setup page in Salesforce, with the 'Custom Object Information' section filled out for a 'Dealer' object:

- Label:** dealer (Example: Account)
- Plural Label:** dealers (Example: Accounts)
- Starts with vowel sound:** ☐
- Object Name:** dealer (Example: Account)
- Description:** (Empty text area)
- Context-Sensitive Help Setting:** ☒ Open the standard Salesforce.com Help & Training window
- Context Name:** --None--

The 'Enter Record Name Label and Format' section shows:

- Record Name:** Dealer Name (Example: Account Name)
- Data Type:** Text (Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.)

The 'Optional Features' section has all checkboxes (Allow Reports, Allow Activities, Track Field History, Allow in Chatter Groups, Enable Licensing) unchecked.

To create an object:

1. From the **Setup** page → Click on **Object Manager** → Click on **Create** → Click on **Custom Object**.
2. Enter the following details:
 - **Label Name** → Dealer
 - **Plural Label Name** → Dealers

- **Record Name** → Dealer Name
 - **Data Type** → Text
3. Click on **Allow Reports**.
 4. Select **Allow Search**.
 5. Click **Save**.

Milestone 3: Data Management-Tabs

Activity 1: Creating a Custom Tab (Vehicle)

1. Go to the Setup page → type Tabs in the Quick Find bar → click on Tabs → click New under Custom Object Tabs.
2. Enter the following details:
 - **Object** → Vehicle
 - **Tab Style** → Select a suitable vehicle icon
 - **Tab Label** → Vehicle
3. Click Next.
4. Set the required tab visibility and permissions.
5. Click Next → Save.

Purpose:

The Vehicle custom tab provides easy access to the Vehicle object and allows users to view and manage vehicle records within the WhatNext Vision Motors Salesforce application.

Milestone 4: Data Management-App Manager

Activity 1: Creating WhatNext Vision Motors App

1. Go to Setup → search App Manager in the Quick Find bar → click App Manager.
2. Click New Lightning App.
3. In App Details & Branding, enter the following:
 - App Name: WhatNext Vision Motors
 - Developer Name: Auto-populated
 - Description: Salesforce CRM application for managing vehicles, dealers, customers, orders, test drives, and service requests.
 - Image: Optional
 - Primary Color: Keep the default value.
4. Click Next.
5. In the App Options page, keep the default settings → click Next.
6. In the Utility Items page, keep the default settings → click Next.
7. Continue to the Navigation Items page and add the required tabs such as:
 - Vehicles
 - Dealers
 - Customers
 - Orders
 - Test Drives
 - Service Requests
 - Reports
 - Dashboards
8. Click Next and configure the required user/profile access.
9. Click Save & Finish.

Custom Object Information

The singular and plural labels are used in tabs, page layouts, and reports. Be careful when changing the name or label as it may affect existing integrations and merge templates.

Label: Example: Account
Plural Label: Example: Accounts
Starts with vowel sound: ☐

The Object Name is used when referencing the object via the API.
Object Name: Example: Account

Description:

Context-Sensitive Help Setting: ☒ Open the standard Salesforce.com Help & Training window
☐ Open a window using a Visualforce page

Context Name:

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.

Record Name: Example: Account Name

Date Type: Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

Optional Features

☒ Allow Reports
☐ Allow Activities

2. Vehicle_Dealer__c (Custom Object)

- Dealer_Name__c (Text)
- Dealer_Location__c (Text)
- Dealer_Code__c (Auto Number)
- Phone__c (Phone)
- Email__c (Email)

The screenshot shows the 'Vehicle Dealer' custom object definition in Salesforce. The left sidebar lists various configuration options like Fields & Relationships, Page Layouts, and Triggers. The main area is titled 'Edit Custom Object Vehicle Dealer' and contains sections for 'Custom Object Information', 'Enter Record Name Label and Format', and 'Optional Features'. In the 'Custom Object Information' section, the 'Label' is 'Vehicle Dealer' and the 'Plural Label' is 'Vehicle Dealers'. The 'Object Name' is 'Vehicle_Dealer'. In the 'Enter Record Name Label and Format' section, the 'Record Name' is 'Vehicle Dealer Name' and the 'Date Type' is 'Text'. The 'Optional Features' section has 'Allow Reports' checked and 'Allow Activities' unchecked.

	☐ checkbox	allows users to enter a boolean value

Step 1 — Data Type

- Select **Picklist**
- Click **Next**

Step 2 — Field Details

Field Label:

Vehicle Model

Sedan

SUV

Hatchback

Electric Vehicle

Luxury

[illegible]

Relationship Field Creation :

Creating a Lookup Relationship in Vehicle Object to Dealer Object.

1. Select DataType as Lookup Relationship.
2. Click Next
3. Select Dealer Object Form Related Field

This screenshot shows the 'New Relationship' setup page in Salesforce, specifically Step 2: Choose the related object. The left sidebar contains a navigation menu with options: Field Sets, Compact Layouts, Buttons, Links, and Actions, Lightning Record Pages, Page Layouts, Fields & Relationships (highlighted), and Details. The main content area is titled 'New Relationship' and 'Vehicle'. It features a 'Related to' dropdown menu set to 'Dealer'. Below this, a text prompt says 'Select the other object to which this object is related'. At the bottom, there are 'Previous', 'Next', and 'Cancel' buttons. A blue banner at the bottom of the main area reads 'Step 2. Choose the related object' and 'Step 2 of 6'. A 'Help for this Page' link is visible in the bottom right corner.

This screenshot shows the 'New Relationship' setup page in Salesforce, specifically Step 3: Enter the label and name for the lookup field. The left sidebar is the same as in the previous screenshot, with 'Fields & Relationships' highlighted. The main content area is titled 'New Relationship' and 'Vehicle'. It features a blue banner at the top that reads 'Step 3. Enter the label and name for the lookup field' and 'Step 3 of 6'. Below this, there are four input fields: 'Field Label' (set to 'Dealer'), 'Field Name' (set to 'Dealer'), 'Description', and 'Help Text'. Each field has an information icon (i) to its right. At the bottom right, there are 'Previous', 'Next', and 'Cancel' buttons. A 'Help for this Page' link is visible in the top right corner.

Milestone 6: Automation

Flow Creation :

Step 1 : In Quick Find, type Flows and click on Flows. Click New Flow.

The screenshot shows the Salesforce Setup interface. On the left is a sidebar with a 'Quick Find' search bar and a list of setup categories including 'Setup Home', 'Salesforce Go', 'Service Cloud Reports', 'Commerce Setup Assistant', 'Hyperforce Assistant', 'Release Updates', 'Salesforce Mobile App', 'Lightning Usage', 'AgentExchange Offers', 'Sales Cloud Everywhere', 'ADMINISTRATION', 'PLATFORM TOOLS', and 'Subscription Management'. The main content area is titled 'SETUP Flows' and includes a 'Flow Trigger Explorer' and a 'New Flow' button. Below this is a 'Flow Definitions' section with a table of existing flows. The table has columns for 'Flow Label', 'Process Type', 'Active', 'Template', 'Package State', 'Package Name', 'Last Modified By', and 'Last Modified Date'. It lists 30 items, including 'Add Case Comment', 'Add or Modify Service Appointment Attendees', 'Approvals Workflow: Evaluate Approval Requests', 'Approvals Workflow: Process Approval Submission', 'Authentication Provider User Registration', 'Auto Assign Dealer', 'Basic Approval Request', 'Book Appointment from Invitation', 'Cancel All Eligible Items Flow', 'Cancel Item Flow', 'Cancel Order', 'Change Case Owner to Incident Owner', 'Chats Routed to Agents and Queues', 'Chats Routed to Agents with the Right Skills', 'Check Flow API Name', 'Check Rep Availability for Routing', 'Check Service Plan Eligibility', and 'Check Service Plan Eligibility for MessagingSession'.

Flow Label	Process Type	Active	Template	Package State	Package Name	Last Modified By	Last Modified Date
Add Case Comment	Autolaunched Flow	✓		Managed-Installed			
Add or Modify Service Appointment Attendees	Salesforce Scheduler Flow	✓		Managed-Installed			
Approvals Workflow: Evaluate Approval Requests	Screen Flow	✓	✓	Managed-Installed			
Approvals Workflow: Process Approval Submission	Screen Flow	✓		Managed-Installed			
Authentication Provider User Registration	Identity User Registration Flow		✓	Managed-Installed			
Auto Assign Dealer	Autolaunched Flow	✓		Unmanaged		SRIRAGH SS	9/30/2026, 1:29 AM
Basic Approval Request	Flow Orchestration for CMS	✓	✓	Managed-Installed			
Book Appointment from Invitation	Salesforce Scheduler Flow	✓	✓	Managed-Installed			
Cancel All Eligible Items Flow	Screen Flow		✓	Managed-Installed			
Cancel Item Flow	Screen Flow		✓	Managed-Installed			
Cancel Order	Autolaunched Flow	✓		Managed-Installed			
Change Case Owner to Incident Owner	Screen Flow		✓	Managed-Installed			
Chats Routed to Agents and Queues	Omni-Channel Flow	✓	✓	Managed-Installed			
Chats Routed to Agents with the Right Skills	Omni-Channel Flow	✓	✓	Managed-Installed			
Check Flow API Name	Autolaunched Flow	✓		Managed-Installed			
Check Rep Availability for Routing	Autolaunched Flow	✓		Managed-Installed			
Check Service Plan Eligibility	Autolaunched Flow		✓	Managed-Installed			
Check Service Plan Eligibility for MessagingSession	Autolaunched Flow		✓	Managed-Installed			

Step 2 : Select Record-Triggered Flow and click Create

The screenshot shows the 'New Automation' dialog box in Salesforce. It has a title bar with 'Free-Form' and a 'Save As New Version' button. The main content area is titled 'Get Started with Automations' and includes a search bar. Below the search bar is a section 'Let Agentforce Help You Build' with a 'Get Started (Beta)' button. The 'Categories' section lists four types of automations: 'Triggered Automations' (launched by records and events), 'Scheduled Automations' (time-based), 'Screen Automations' (interface-driven), and 'Autolaunched Automations' (invoked by APIs, templates, etc.). The 'Frequently Used' section lists four specific flow types: 'Record-Triggered Flow' (launches when a record is created, updated, or deleted), 'Screen Flow' (guides users through a business process), 'Schedule-Triggered Flow' (launches at a specified time and frequency), and 'Autolaunched Flow (No Trigger)' (launches when invoked by Apex, processes, REST API, etc.).

Step 3: Select Vehicle Order Object

Trigger the Flow When : Select Record is Created.

Set Entry Condition : All Conditions Are Met (AND) Filed : Status__c Operator : Equals Value : Pending

Step 4 : Click Save and Give label Name and Activate Flow.

Record-Trigger Flow Creation

Creating a record triggered flow to send an email to the customer reminding about the test drive.

Step 1 : Select Record-Triggered Flow and click Create

Step 2 : Select Vehicle Test Drive Object

Trigger the Flow When : A record is created or updated

Set Entry Condition :

- All Conditions Are Met (AND)
- Filed : Status__c
- Operator : Equals
- Value : Scheduled

Step 3 : Click + Add Scheduled Paths (below the trigger).

- Label: Reminder Before Test Drive.
- Time Source: Test_Drive_Date__c
- Offset Number: 1.
- Offset Options: Days Before.

- Click Done.

Milestone 7: Apex and Batch Class

Create Apex and Trigger Batch Jobs :

Step 1 : Click Developer Console From Gear icon

Step 2 : click File then Select New then Select Apex.

WhatNext Vision Motors – Salesforce Implementation

Step 2 : click File then Select New then Select Apex.

Step 3 : Give Name For Apex Class

Step 4 : Write Apex Code

```
public class VehicleOrderTriggerHandler {  
  
    public static void handleTrigger(  
        List<Vehicle_Order__c> newOrders,  
        Map<Id, Vehicle_Order__c> oldMap,  
        Boolean isBefore,  
        Boolean isAfter,  
        Boolean isInsert,  
        Boolean isUpdate  
    ) {  
  
        if (isBefore && (isInsert || isUpdate)) {  
  
            Set<Id> vehicleIds = new Set<Id>();  
  
            for (Vehicle_Order__c order : newOrders) {  
                if (order.Vehicle__c != null) {  
                    vehicleIds.add(order.Vehicle__c);  
                }  
            }  
  
            if (!vehicleIds.isEmpty()) {  
  
                Map<Id, Vehicle__c> vehicleMap =  
                    new Map<Id, Vehicle__c>([  
                        SELECT Id, Stock_Quantity__c  
                        FROM Vehicle__c  
                        WHERE Id IN :vehicleIds  
                    ]);  
  
                for (Vehicle_Order__c order : newOrders) {  
  
                    if (order.Vehicle__c != null &&  
                        vehicleMap.containsKey(order.Vehicle__c)) {  
  
                        Vehicle__c vehicle =
```

Step 5 : Writer Trigger Class Name and Select Vehicle Order Object

The screenshot displays the Salesforce IDE with the Apex code for the `VehicleOrderTriggerHandler` class. The code is as follows:

```
public class VehicleOrderTriggerHandler {  
  
    public static void handleTrigger(  
        List<Vehicle_Order__c> newOrders,  
        Map<Id, Vehicle_Order__c> oldMap,  
        Boolean isBefore,  
        Boolean isAfter,  
        Boolean isInsert,  
        Boolean isUpdate  
    ) {  
  
        if (isBefore && (isInsert || isUpdate)) {  
  
            Set<Id> vehicleIds = new Set<Id>();  
  
            for (Vehicle_Order__c order : newOrders) {  
                if (order.Vehicle__c != null) {  
                    vehicleIds.add(order.Vehicle__c);  
                }  
            }  
  
            if (!vehicleIds.isEmpty()) {  
  
                Map<Id, Vehicle__c> vehicleMap =  
                    new Map<Id, Vehicle__c>([  
                        SELECT Id, Stock_Quantity__c  
                        FROM Vehicle__c  
                        WHERE Id IN :vehicleIds  
                    ]);  
  
                for (Vehicle_Order__c order : newOrders) {  
  
                    if (order.Vehicle__c != null &&  
                        vehicleMap.containsKey(order.Vehicle__c)) {  
  
                        Vehicle__c vehicle =
```

Overlaid on the code is the 'New Apex Trigger' dialog box. It contains the following fields:

- Name: `vehicleorderttrigger`
- Object: `Vehicle_Order__c`

The 'Submit' button is visible at the bottom right of the dialog.

Step 6: Create Batch Job A customer places an order, but the vehicle is out of stock.

- The order remains pending.
- After new stock is added, the batch job updates the order to confirmed.

WhatNext Vision Motors – Salesforce Implementation

Step 7 : Create Schedule Class then revoked Batch Class in Schedule Class

7.FUNCTIONAL & PERFORMANCE TESTING

During testing, screenshots were captured from Salesforce to validate vehicle creation, dealer assignment, stock validation triggers, order status updates, batch processing, scheduled reminders, and dashboard analytics. All features were verified to ensure correct functionality and performance.

8.ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data
- Automated workflows
- Real-time reporting

Disadvantages

- Salesforce dependency
- Requires initial configuration effort

9. Conclusion:

The Salesforce CRM implementation at WhatNext Vision Motors successfully modernizes vehicle ordering and dealership management. Automation improves efficiency, accuracy, and customer experience.

10.FUTURE SCOPE

- Mobile ordering app
- Dealer GPS integration
- SMS notifications
- AI-based demand forecasting
